

NARTHECIACEAE

Bog Asphodel family

Narthecium ossifragum (L.) Hudson

Bog Asphodel

Egerton J Haddon 2021

Status & distribution: Native, Least Concern (Red List for England); Axiophyte, occasional on the higher ground; locally frequent to locally abundant on the West Pennine Moors.

Former distribution: Once a feature of the extensive lowland raised bog system.

Habitat: Moorland blanket bogs and acidic flushes.

Comments: Re-establishment of this species on some the remaining lowland mosslands that are under restoration is underway by the Lancashire Wildlife Trust & J Styles.
